CHAP
III. [illegible] ATIONS ON THE THEME OF MODERN MATERIALI 96

;SM.....

. B. Moore's colloidal super-molecule—His Biotic Energy illegitimate and not widely different from Vital Force—Loewenthal's Super-Matter—Gaskell's Para-matter—R. g. Lillie's Psycho-Matter—Goldschmidt's unsuccessful attempt at a purely chemical theory of morphogenesis—The mushroom fatal to all such attempts.

IV. SOME OTHER SUPPORTS FOR THE MECHANICAL BIOLOGY 131

The Half-Living—the virus—the *Gestalt* theory brings new hope to the Mechanists—Kohler's search for a regulative physical principle which may explain the teleological processes of organisms—Planck's law stat-able only in teleological terms.

V. EMERGENT EVOLUTION AND HYLOZOISM . . 143

Emergent Principle valid only on postulate of Hylo-zoism—Thus gives no support to the Mechanical Biology,

VI. THE HOLISTIC VIEWS OF THE ORGANICISTS . 149

The Organismic doctrines of Ritter—of Alverdes—of Bertalanrfy—hover in uncertain middle ground between Mechanism and Repudiation of Mechanism and fail to find a stable position—Organicism of K. Goldstein is frankly anti-mechanist—All these neglect to provide any theory of the Wholeness they postulate—All overstate the dependence of parts on the whole.

VIL TELEOLOGICAL HOLISM 176

J. S. Haldane's version—Whitehead's—Smuts'—Stem's PersonaKsm—Hobhouse—Myers—The weak-ness _of ail these closely allied Views is the lack of all empirical Evidence to support the Hylozoism they all * postulate.

VIII. THE MNEMIC BIOLOGY *AND* THE KEY PROBLEMS OF MEMORY AND INSTINCT 190

The mechanistic Neo-Lamarckism of Semon—the tetofogjcal Neo-Lamarckism of Rignano and Bleuler -""ae ^eory of ™ Material Engram common

to all
tttee?~~N? ?®e of ^ena succeeds in making a plausible
W»B of mis theory.
